authentic works of literature. Five types of discourse are considered in detail--narration, description, persuasion, exposition, and lyrical expression. With carefully crafted vocabulary, grammar, and exercise sections in each lesson, the book assists learners in improving writing and speaking skills, recognizing the difference between colloquial discourse and more formal discourse, and acquiring a sophisticated understanding of the meanings and nuances of the language. The authors also include a useful list of supplementary readings that may be used to enhance the texts in the book. Audio files are online at yalebooks.com/advancedchinese.

Cutting-edge in its approach and international in its authorship, this fourth monograph in a series sponsored by the Chinese Language Teachers Association features eight research studies that explore a variety of themes, topics, and perspectives important to a variety of stakeholders in the Chinese language learning community. Employing a wide range of research methodologies, the volume provides data from actual Chinese language learners and will be of value to both theoreticians and practitioners alike. [in English & Chinese]

China has emerged as a major regional power and has clear aspirations to be a global power in the not too distant future. Comprehensive military modernisation programs, sustained economic, scientific and technological developments have substantially elevated China's international profile. For the past three decades, China has been modernising its strategic weaponry and enhancing the capabilities of its nuclear warheads. It has also been developing new and complex military platforms that would be of great value to joint operations warfare. The decade from 2011 through 2020 will prove critical to the PLA as it attempts to integrate many new and complex platforms, and to adopt modern operational concepts, including network-centric warfare. China's air force is in the midst of a transformation. A decade ago, it was an antiquated service equipped almost exclusively with weapons based on 1950s-era Soviet designs and operated by personnel with questionable training according to outdated employment concepts. Today, the PLAAF appears to be on its way to becoming a modern, highly capable air force for the 21st century. The PLA Air Force has continued expanding its inventory of long-range, advanced SAM systems and now possesses one of the largest such forces in the world. The January 2011 flight test of China's next generation fighter prototype, the J-20, highlights China's ambition to produce a fighter aircraft that incorporates stealth attributes, advanced avionics, and super-cruise capable engines over the next several years. China is upgrading its B-6 bomber fleet with a new, longer-range variant that will be armed with a new long-range cruise missile. China's aviation industry is developing several types of airborne early warning and control system (AWACS) aircraft. These include the KJ-200, based on the Y-8 airframe, for AWACS as well as intelligence collection and maritime surveillance, and the KJ-2000, based on a modified Russian IL-76 airframe. China can decisively defeat India in any nuclear confrontation, but is currently unable to match the IAF in any conventional conflict, specifically along the border region of the Himalayas. Also, the IAF has greater experience than PLAAF in actual combat operations with its many conflicts; India is gradually building powerful military capabilities in tune with its expanding geopolitical interests, even as the eastern and western fronts are being strengthened to deter the twin Pakistan-China threat. IAF is on the path to transform into a true aerospace power with the capability to rapidly deploy and operate at great distances. As for the two-front challenge, apart from progressively basing Sukhoi-30MKI fighters and missile squadrons in the two theatres, the plan also includes upgrading the airfields and advanced landing grounds in the sectors in order to give both defensive and offensive options. It is important for India to realise the relevance of Chinese achievements in space technologies and to critically view and analyse Chinese achievements in the area of manned space missions In order to achieve further success in the space arena, developments in cryogenic

technology are important for India. These should be pursued in order to develop the capability of launching 4-5 ton satellites, which will help in achieving a greater commercial edge. Programmes like moon and mars missions, using robotic technologies, are also important in order to know more about the nature of resources, especially minerals, available on these bodies and undertaking their mining. It is also important to work towards launching satellites for India's armed forces, which will help gain an advantage over adversaries. The book is an attempt to analyse the strategic importance of rising economic, political and military stature of China with a view to understand its regional and global implications in a new world order. As a rational actor in a chaotic world, China will defend its security interests at all costs. Besides undertaking a comprehensive modernisation of its armed forces, China is developing a series of offensive space capabilities while advocating the peaceful use of outer space. The book will be of immense value not only to the readers of the countries in the immediate neighbourhood of China, but to the strategic community across the globe since rise of China and other major Asian players including India will shape the strategic international environment in the decades to come during this century. It is hoped that the book will contribute to the understanding of the growing importance of integration of air and space and the fact that aerospace has truly become the new theatre of war and thereby establishing a new milestone in mankind's history of warfare. The unifying space dimension will remain the single most important source for information and communication which can be used in multiple forms. Hence, China's aerospace strategy and its implications for India assume greater military importance.

Calling for more cooperation between China and the west, this new book by noted author and educator Cary Krosinsky provides readers with an on-the-ground perspective of what's really happening in China today on the back of its recent economic rise, its desire and need to solve environmental challenges and the new positive dynamic created by its need for foreign capital. In doing so, Krosinsky and his colleagues from the Sustainable Finance Institute and Brown University highlight how China has recaptured its role as a leader in innovation, arguing that current approaches to the relationship hinder global progress on issues such as climate change, inequality, air pollution, food integrity and water security and pushes back on confrontational approaches and attempts to clarify misperceptions about contemporary China. China's recent rise includes becoming a global leader on green policy and green finance, as it is increasingly leading the way towards modernization through innovation strategies focused on infrastructure, education, healthcare and aspects of clean energy technology, leading to opportunities across private equity, venture capital and green bonds. This creates an exciting opportunity for positive change, with environmental challenges becoming more salient to its own population, adding pressure on the government to provide solutions. China changes faster than any country in the world, creating an opportunity for meaningful, ongoing, positive transitions. Modern China is a call for more cooperation, and makes a clear, cogent case for collaboration in the face of current confrontational approaches. At the same time, dire environmental and social circumstances require an all-hands-on-deck approach. This book provides specific examples of what's working and what's needed to compete and thrive in this new paradigm through trusted relationships placed front and center for the future of economies and the betterment of global society.

The decisions that shape the policy of weapons procurement are an important area of national security policy. This is all the more true for China, which during recent decades has vacillated between different sources and directions of military build-up. This book explores the politics of military procurement in China under the successive leaderships of Deng Xiaoping, Jiang Zemin and Hu Jintao. It shows how China's political and military leaders have sought to adjust military procurement policy to meet China's strategic objectives, to relate it to non-military needs, to strike a balance between the import of weapons and indigenous production, and to determine the connections between hardware and other components of military power. Exploring in detail five major shifts in the nation's military procurement, it traces the considerations and negotiations among China's civilian and military leaderships. By doing so, it offers both a conceptual framework and empirical grounds for evaluating the factors that shape China's military procurement directions, as well as their limitations, prospects, and operational implications. As the first book to study comprehensively and systematically the attributes shaping China's military procurement, it will be of great interest to students and scholars of Chinese politics, Chinese history and military and strategic studies.

This book examines the evolution of China's maritime security strategy, and questions what has made China shift from a constrained to a more assertive strategy. Historically, China has not been an active player in maritime security, but in recent years Beijing has begun to pursue policies and measures to safeguard its maritime rights and interests in the Indo-Pacific region. This growing influence in the region has become a concern for other countries about what kind of sea power China is developing. This book seeks to address this concern by providing an overview of the development of China's maritime security strategy from the era of Deng Xiaoping to Xi Jinping. It suggests that while the involvement of maritime actors and the development of naval capability have provided the depth to the strategy, the national strategic guidelines from each generation of Chinese leadership have determined the overall direction of the maritime security strategy. After 40 years of development, China has established a set of priorities for its maritime agenda: territorial integrity is at the top, followed by development, and then regional and international maritime cooperation. These findings help us to understand China's multidimensional maritime power as being both assertive and cooperative. This book will be of much interest to students of naval strategy, maritime security, Chinese politics and International Relations.

From before the dawn of recorded history, there has been a rich flow of interaction between Japan and China. Japan has long learned many things from Chinese civilization, and since the modern era China began to learn from Japan. In the twenty-first century, however, China surpassed Japan in terms of GDP in 2010 to become the world's second largest economy. Amid this rapid rise of China and what has been called a power-shift in Japan-China relations, there are signs that bilateral tensions are rising and that the image each country has of the other is worsening. This volume provides a cogent analysis of the politics of the bilateral relationship in the modern era, explaining the past, present, and future of Japan-China relations during a time of massive political, social, and economic changes. Written by a team of internationally renowned Japanese scholars and based on sources not available in English, this book is essential reading for students and scholars of Japan-China relations, Japanese international relations, and the politics and international relations of East Asia

The first work of its kind, this strategic assessment of China's national security reveals the nation's intentions, capabilities, and threats—and

File Type PDF Advanced Chinese Intention Strategy And Communication

their implications for the United States and the world. □ Offers a strategic assessment of China, past and present □ Analyzes China's traditional and non-traditional security threats, including economic and resource security □ Provides a cogent examination of China's security strategies—historically, regionally, and internationally □ Includes in-depth discussions of China's internal security dynamics □ Shares original research performed by leading scholars in the field, professional intelligence analysts, and journalists based in East Asia
