This book will also show you some secret "hot rod" techniques that the pros use. This book will teach you how to do coil tapping, coil cutting, phase switching, series wiring, parallel wiring, bridge-on switching, mini toggle switching, varitone switching, mega switching, yamaha switching, blend pots, and much more !!!

A fascinating tour of the urban landscape and interiors of Tokyo, Japan, captures in hundreds of full-color photographs the tiny crowded apartments of one of the world's most densely populated metropolises. Original.

This popular Build-It-Yourself (BIY) PC book covers every step in building one's own system: planning and picking out the right components, step-by-step assembly instructions, and an insightful discussion of why someone would want to do it in the first place.

Detailed coverage of hardware circuits, software concepts and interfaces, test equipments and diagnostic aids; complete hardware design at the systems and components level of an IBM PC and its clones; common problems with their detailed troubleshooting procedure; practical tips for troubleshooting and quick diagnosis; systematic analysis of the POST sequence.CD includes: Video on PC Assembling: Step-by-step procedure of assembling a PC (supplement to Chapter 13), followed by a live demonstration; Anti-Virus software: Trial version of Vx2000 plus an antivirus package from K7 COMPUTING.

A look into what lies behind great ideas and brilliant advertising, told by one of the industry's leading players. What makes a great idea? How does one best pitch to a prospective client? What effect will new technology have on advertising? Written by one of the world's leading advertising creatives, Hegarty on Advertising contains over four decades of wisdom and insight from the man behind hugely effective and influential campaigns for brands such as Levi Strauss, Audi, and Unilever. The book is both an advertising credo and a brilliantly entertaining memoir. The first part offers John Hegarty's personal insights and advice on the advertising business: Ideas, Brands, The Agency, Briefs, Pitching, Storytelling, and Technology. In the second part, Hegarty talks about his own career and experiences, from his early days working with Charles Saatchi to the founding of Bartle Bogle Hegarty (BBH) in 1982 and its rise to global renown with offices in London, New York, Singapore, Shanghai, Mumbai, and Sao Paulo.

Chip Block, the hero of Parts, is back, and still worried about falling apart based on the things he hears. This time he's made a list of all the strange, crazy things he's heard people say: "I lost my head." "My nose is running." "I sang my heart out. . . ." It's scary stuff, but he has a plan for making sure he doesn't accidentally leave any of his parts behind. A hilarious sequel to the wildly popular Parts and More Parts.

Developers who want to access USB devices from their embedded systems will find a helpful resource in USB Embedded Hosts: The Developer's Guide. This new book from the author of USB Complete shows how small systems can take advantage of the same wealth of

USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.

Explains how to upgrade and repair processors, memory, connections, drives, multimedia cards, and peripherals.
