Stephen Kellert et al ono describe in detail the concept of biophilia in their book Biophilic Design: The Theory, Science and Practice of Bringing Buildings to Life. Biophilia, which until recently has not been a very well known topic of discussion, is the relationship between the natural human condition and the natural world, more specifically how people need an outlet to their natural environment.

Biophilia is a hypothesis that suggests humans posses an deep, biologically-rooted tendency to seek connections with nature, and other forms of life. Popularized by E.O Wilson, the term biophilia means 'love of life, or living systems.'. Biophilic Design: Science, Theory, Economics & Practice is an hour-long course that explains the human connection to nature within the built environment.

Biophilic Design: Science, Theory, Economics & Practice Biophilic design is a concept used within the building industry to increase occupant connectivity to the natural environment through the use of direct nature, indirect nature, and space and place conditions. Used at both the building and city-scale, it is argued that this idea has health, environmental, and economic benefits for building occupants and urban environments, with few drawbacks. Although its name was coined in recent history, indicators of biophilic design have been Page 12/21

Biophilic design Wikipedia Theorists, research scientists, and design practitioners have been working for decades to define aspects of nature that most impact our satisfaction with the built environment. "14 Patterns of Biophilic Design" articulates the relationships between nature, human biology and the design of the built environment so that we may experience the human benefits of biophilia in our design applications.
