Cancer and the LGBT Community There are approximately 1 million LGBT cancer survivors in the country today. This is based on the common estimate that approximately 4% of the population is gay, lesbian, bisexual and/or transgender and that this population is overrepresented among cancer survivors. Nearly every doctor has LGBT people as patients.

Cancer and the LGBT Community: Unique Perspectives from Risk to Survivorship covers the scope of current knowledge of cancer in the LGBT community across the entire cancer continuum, from understanding risk and prevention strategies in LGBT groups, across issues of diagnosis and treatment of LGBT patients, to unique aspects of survivorship and death and dying in these communities. Each chapter includes an in depth analysis of the state of the science, discusses the many remaining challenges ...

### Cancer and the LGBT Community: Unique Perspectives from ...

Lesbian, gay, bisexual and transgender people do not. However, there is reason to believe that LGBT people are carrying a disproportionate cancer burden. There is adequate research to confirm that lesbian, gay, bisexual and transgender people have a unique "cluster of risk factors" that would lead us to have both greater cancer incidence and later stage diagnosis.

Tobacco is the leading cause of cancer-related deaths, so it's important to get help to quit. "Research shows that members of the LGBT community are more likely to smoke or use other forms of tobacco like e-cigarettes," says Ball. The best way to quit tobacco is to use medications and get counseling.

### Cancer and the Transgender Community - Oncology Nurse Advisor

While very little cancer research has focused on the LGBT community, cancer may affect this population at different rates and in different ways than their heterosexual counterparts. A 2011 study in the journal Cancer found that gay men who responded to the California Health Interview Survey were nearly twice as likely as straight men to be cancer survivors.

This book covers the scope of current knowledge of cancer in the LGBT community across the entire cancer continuum, from understanding risk and prevention strategies in LGBT groups, across issues of diagnosis and treatment of LGBT patients, to unique aspects of survivorship and death and dying in these communities. Each chapter includes an in depth analysis of the state of the science, discusses the many remaining challenges and unanswered questions and makes recommendations for research, policy and programmatic strategies required to address these. Focus is also placed on the diversity of the LGBT communities. Issues that are unique to cancer in LGBT populations are addressed including the social, economic and cultural factors that affect cancer risk behaviors, barriers to screening, utilization of health care services, and legislation that directly impacts the health care of LGBT patients, healthcare settings that are heterosexist and unique aspects of patient-provider relationships such as disclosure of sexual orientation and the need for inclusion of expanded definition of family to include families of choice. The implications of policy change, its impact on healthcare for LGBT patients are highlighted, as are the remaining challenges that need to be addressed. A roadmap for LGBT cancer prevention, detection, diagnosis, survivorship, including treatment and end of life care is offered for future researchers, policy makers, advocates and health care providers.

At a time when lesbian, gay, bisexual, and transgender individuals—often referred to under the umbrella acronym LGBT—are becoming more visible in society and more socially acknowledged, clinicians and researchers are faced with incomplete information about their health status. While LGBT populations often are combined as a single entity for research and advocacy purposes, each is a distinct population group with its own specific health needs. Furthermore, the experiences of LGBT individuals are not uniform and are shaped by factors of race, ethnicity, socioeconomic status, geographical location, and age, any of which can have an effect on health related concerns and needs. The Health of Lesbian, Gay, Bisexual, and Transgender People assesses the state of science on the health status of LGBT populations, identifies research gaps and opportunities, and outlines a research agenda for the National Institute of Health. The report examines the health status of these populations in three life stages: childhood and adolescence, early/middle adulthood, and later adulthood. At each life stage, the committee studied mental health, physical health, risks and protective factors, health services, and contextual influences. To advance understanding of the health needs of all LGBT individuals, the report finds that researchers need more data about the demographics of these populations, improved methods for collecting and analyzing data, and an increased participation of sexual and gender minorities in research. The Health of Lesbian, Gay, Bisexual, and Transgender People is a valuable resource for policymakers, federal agencies including the National Institute of Health (NIH), LGBT advocacy groups, clinicians, and service providers.

Black LGBT Health in the United States: The Intersection of Race, Gender, and Sexual Orientation focuses on the mental, physical, and spiritual aspects of health, and considers both risk and resiliency factors for the Black LGBT population.

This is the first concise handbook on Lesbian, Gay, Bisexual and Transgender (LGBT) health in the past few years. It breaks the myths, breaks the silence, and breaks new ground on this subject. This resource offers a multidimensional picture of LGBT health across clinical and social disciplines to give readers a full and nuanced understanding of these diverse populations. It contains real-world matters of definition and self-definition, meticulous analyses of stressor and health outcomes, a extensive coverage of research methodology concerns, and critical insights into the sociopolitical context of LGBT individuals' health and lives.

Collecting Sexual Orientation and Gender Identity Data in Electronic Health Records: Workshop Summary reviews the statement of task set to the committee which required them to collect sexual orientation and gender identity data in electronic health records. This report summarizes the invited presentations and facilitated discussions about current practices around sexual orientation and gender identity data collection, the challenges in collecting these data, and ways in which these challenges can be overcome. Areas of focus for the workshop include the clinical rationale behind collecting these data, standardized questions that can be used to collect these data, mechanisms for supporting providers and patients in the collection of these data, technical specifications involved in creating standards for sexual orientation and gender identity data collection and exchange, and policy considerations related to the health information technology (HIT) Meaningful Use process being overseen by the Department of Health and Human Services. This report summarizes the workshop agenda, select invited speakers and discussants, and moderate the discussions. Invited participants will include lesbian, gay, bisexual, and transgender (LGBT) health care consumer advocates, providers with experience working with LGBT populations, HIT vendors and other HIT specialists, health care administrators, and policy makers.

This book provides an overview of research and practice dealing with the specific needs of gay and bisexual men living with prostate cancer, as well as the special psychosocial needs of their partners. The intention is twofold: to provide insight into the unique experiences and concerns of gay or bisexual men living with prostate cancer in order to inform and assist future research, clinical practice and supportive care, and policy; and to ensure that the needs of gay and bisexual men are recognized and advanced on the mainstream prostate cancer agenda. Featuring both cutting-edge research and powerful portraits of gay and bisexual men living with prostate cancer, this book will be indispensable for health care, oncology, and mental health practitioners who seek to address their specific experiences and challenges.

A top American gay activist shares inspirational stories of queer icons in a series of revealing close-ups, first-person accounts, and intimate snapshots of LGBTQ pioneers and heroes.

This is the only handbook for hospice and palliative care professionals looking to enhance their care delivery or their programs with LGBTQ-inclusive care. Anchored in the evidence, extensively referenced, and written in clear, easy-to-understand language, LGBTQ-Inclusive Hospice and Palliative Care provides clear, actionable strategies for hospice and palliative physicians, nurses, social workers, counselors, and chaplains.

Before speaking at a national political convention about her experiences as a transgender person, the author struggled with the decision to come out - not just to her family but to the students at her university, where she was serving as student body president. She'd known she was a girl from her earliest memories, but it wasn't until a Facebook post announcing her truth went viral that she realized the impact her story could have on the country. Four years later, the author was one of the nation's most prominent transgender activists, walking the halls of the White House, advocating inclusive legislation, and addressing the country in the midst of a heated presidential election. She had also found her first love and future husband, a trans man and fellow activist, who complemented her in every way - until cancer tragically intervened. This book is the author's story of love and loss and an account of the LGBTQ community's battle for equal rights--adapted from dust jacket.

LGBT Health: Meeting the Needs of Gender and Sexual Minorities offers a first-of-its-kind, comprehensive view of mental, medical, and public health conditions within the LGBT community. This book examines the health outcomes and risk factors that gender and sexual minority groups face while simultaneously providing evidence-based clinical recommendations and resources for meeting their health needs. Drawing from leading scholars and practitioners of LGBT health, this holistic, centralized text synthesizes epidemiologic, medical, psychological, sociological, and public health research related to the origins of, current state of, and ways to improve LGBT health. The award-winning editors have assembled LGBT health experts who have conducted extensive research into diverse areas of LGBT health. Sections guide the reader through the entire spectrum of LGBT health, from the historical roots of LGBT health research all the way to modern, emerging lines of inquiry to improve health among diverse gender and sexual minority groups. Specific groundbreaking coverage includes such populations as LGBT veterans; reproductive health and parenting; sexual minority persons living with chronic illness and disability, and more. This encompassing volume serves as a go-to reference, a call to action, and a guide for anyone involved in researching and improving the health of LGBT populations. Key Features Synthesizes research from the psychological, sociological, medical, and public health fields into a comprehensive discussion of LGBT health Covers the continuum of health from antecedents and sociocultural determinants through specific evidence-based approaches for improving outcomes Includes specific focus on a wide range of health outcomes, including topics often neglected in the field such as reproductive health and parenting, intimate partner violence, cancer, and other chronic diseases Specifically investigates a variety of LGBT subgroups and their unique health needs including for LGBT veterans, transgender men and women, and racial and ethnic minorities who are LGBT
