Digital Instrumentation and Control The Instrumentation and Controls (I&C) systems of a nuclear power plant (NPP) function as the "nervous system" of the plant. They provide operators with critical safety information on plant operation, allow operators to control various plant safety systems during routine operations, and automatically protect the reactor core during potential accident events.

NRC: Digital Instrumentation and Control
Digital Instrumentation and Controls Research. The NRC Office of Nuclear Regulatory Research (RES) performs research related to tools, methods, procedures, acceptance criteria, and guidance to assess the safety and security of digital instrumentation and controls (I&C) systems in the U.S. nuclear industry. RES provides technical information to support licensing decisions and prepares for the future by evaluating the safety implications of new technologies and designs in the area of digital I&C.
