Classification is a crucial skill for all information workers involved in organizing collections. This new edition offers fully revised and updated guidance on how to go about classifying a document from scratch. Essential Classification leads the novice classifier step by step through the basics of subject cataloguing, with an emphasis on practical document analysis and classification. It deals with fundamental questions of the purpose of classification in different situations, and the needs and expectations of end users. The reader is introduced to the ways in which document content can be assessed, and how this can best be expressed for translation into the language of specific indexing and classification systems. Fully updated to reflect changes to the major general schemes (Library of Congress, LCSH, Dewey and UDC) since the first edition, and with new chapters on working with informal classification, from folksonomies to tagging and social media, this new edition will set cataloguers on the right path. Key areas covered are: - The need for classification - The variety of classification - The structure of classification - Working with informal classification - Management aspects of classification - Classification in digital space. This guide is essential reading for library school students, novice cataloguers and all information workers who need to classify but have not formally been taught how. It also offers practical guidance to computer scientists, internet and intranet managers, and all others concerned with the design and maintenance of subject tools.

\*\*\*\*When not purchasing directly from the official sales agents of the WHO, especially at online bookshops, please note that there have been issues with counterfeited copies. Buy only from known sellers and if there are quality issues, please contact the seller for a refund.\*\*\*\* The WHO Classification of Tumours Central Nervous System Tumours is the sixth volume in the 5th edition of the WHO series on the classification of human tumors. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumors and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. What's new in this edition? The 5th edition, guided by the WHO Classification of Tumours Editorial Board, will establish a single coherent cancer classification presented across a collection of individual volumes organized on the basis of anatomical site (digestive system, breast, soft tissue and bone, etc.) and structured in a systematic manner, with each tumor type listed within a taxonomic classification: site, category, family (class), type, and subtype. In each volume, the entities are now listed from benign to malignant and are described under an updated set of headings, including histopathology, diagnostic molecular pathology, staging, and easy-to-read essential and desirable diagnostic criteria. Who should read this book? Pathologists Neuro-oncologists Neuroradiologists Medical oncologists Radiation oncologists Neurosurgeons Oncology nurses Cancer researchers Epidemiologists Cancer registrars This volume Prepared by 199 authors and editors Contributors from around the world More than 1100 high-quality images More than 3600 references WHO Classification of Tumours Online The content of this renowned classification series is now also available in a convenient digital format by purchasing a subscription directly from IARC here.

This book is an introduction to soil science and describes the development of soils, their characteristics and material composition, and their functions in terrestrial and aquatic environments. Soil functions include the delivery of goods and services for human society, such as food, clean water, and the maintenance of biodiversity. This concise yet comprehensive text is supplemented throughout with colour illustrations, diagrams, and tables. It is ideal reading for all those looking to understand soils, their functions, their importance in terrestrial and aquatic environments, and their contribution to the development of human society. It will provide a valuable resource for teachers, practitioners, and students of soil science, agriculture, farming, forestry, gardening, terrestrial and aquatic ecology, and environmental engineering.

Essential Orthopedics: Principles & Practice is an extensive, illustrated guide to the field of orthopaedics. Principles and practice for shoulder, hip, spine, hand, foot and ankle are covered, including anatomy, physiology, pathology and diseases. Essential Orthopedics: Principles & Practice includes all modern research methodologies, such as biostatistics, advanced imaging and gene therapy. Enhanced by 2000 full colour illustrations this is a comprehensive resource for all

interns, residents and orthopaedic surgeons.

The Practice of Traditional Western Herbalism places the function of western herbs in their true historical context, apart from homeopathy, traditional Chinese medicine, and Ayurveda. Recently there has been a revival of interest in western herbalism, but practitioners haven't been able to explore its benefits due to a void of information on the topic—the system of medicine the herbs fit into had all but disappeared. To remedy the situation, herbalist Matthew Wood has researched the old-time practices and reconstructed them for modern use. In resuscitating western herbal medicine and bringing it up to date, he gives his readers a powerful tool for holistic theory and treatment. Wood makes the point that plant medicines, because they are made from a broad range of chemical components, are naturally suited for the treatment of general patterns in the body. He argues against the biomedical model of standardization, in which herbs are refined and advertised as if they were drugs suited to an exact disease or condition.

Illustrated throughout, this textbook is ideal for medical students. It aims to help them master the essentials of the subject during their short clinical attachment. Only the core 'must know' information is included.
