~~Genetically modified foods | Food Standards Agency~~

In short, there is little difference between altering DNA through selective breeding and altering it through genetic engineering, and your body can't tell the difference between GM and non-GM foods.

Genetic engineering can actually be used to increase the nutrient density in food. The now famous "Golden Rice Project" is a good example. Food scientists modified ordinary rice to be rich in vitamin A and this is now grown in areas where vitamin A deficiency is a major cause of child ...

~~What is GMO food? - BBC Good Food~~

Some strange GMO foods include blomatoes (blueberries and tomatoes), Granny Smith 2.0s (they don't brown after being cut), and scorpio-cabbage (it is a cabbage that produces its own venom). The idea of biting into a cabbage that produces its own venom to kill insects can make someone a bit squeamish.

~~Genetically Modified Food: A Short Guide For the Confused ...~~

Genetically modified foods (GM foods), also known as genetically engineered foods (GE foods), or bioengineered foods are foods produced from organisms that have had changes introduced into their DNA using the methods of genetic engineering. Genetic engineering techniques allow for the introduction of new traits as well as greater control over traits when compared to previous methods, such as selective breeding and mutation breeding.
