the problem. Business Statistics 6e, emphasizes applications over theory. It illustrates how vital statistical methods and tools are for today's managers and analysts and how to apply them to business problems using real-world data. Using a proven three-step Identify-Compute-Interpret (ICI) approach to problem solving, the text teaches you how to (1) IDENTIFY the correct statistical technique by focusing on the problem objective and data type; (2) COMPUTE the statistics doing them by hand and using Excel; and (3) INTERPRET results in the context of the problem. This unique approach enhances your comprehension and practical skills. The text's vast assortment of data-driven examples,

microfilm, digital data bases--we have better technology than ever for studying and preserving the past. And yet the by-products of technology threaten to destroy--in one or two generations--monuments, works of art, and ways of life that have survived thousands of years of hardship and war. This paradox is central to our age. We use the Internet to access and assess infinite amounts of information--but understand less and less of its historical context. Globalization may eventually benefit countries around the world; it will also, almost certainly, lead to the disappearance of hundreds of regional dialects, languages, and whole societies. the Past, Alexander Stille takes us on a tour of the past as it exists today and weighs its prospects for tomorrow, from China to Somalia to Washington, D.C. Through incisive portraits of their protagonists, he describes high-tech struggles to save the Great Sphinx and the Ganges; efforts to preserve Latin within the Vatican; the digital glut inside the National Archives, which may have lost more information in the information age than ever before; an oral culture threatened by a "new" technology: writing itself. Wherever it takes him, Stille explores not just the past, but our ideas about the past, how they are changing--and how they will have to change if our past is to have a future.

Poetry. Latino/Latina Studies. LGBT Studies. "Like Whitman, Quesada is a poet of motion—journeying to the center of the US, where the traditions and innovations of first-generation Americans traverse the meditative starbursts of hills; ford rivers; cross prairies; and seek out 'the alpenglow of tomorrow and tomorrow.' From Costa Rica to Los Angeles and across the continent, Quesada's poems chronicle one family's history: from the courtship of his parents to their separation, from his childhood struggles to awakening desire from his mother's lottery winnings to his

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces. Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its natural setting.

The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R^3 as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.
