Heart-lung transplants are only recommended after very careful consideration and an in-depth assessment. The assessment will be done at your nearest transplant centre. The aim of the assessment is to build a detailed picture of your current health and to check for underlying problems that could make you unsuitable for a transplant. You'll have several tests, which may include blood tests, urine tests, blood pressure tests, lung and heart function tests, X-rays and scans.

A heart-lung transplant is a procedure carried out to replace both heart and lungs in a single operation. Due to a shortage of suitable donors and due to the fact that both heart and lung have to be transplanted together, it is a rare procedure; only about a hundred such transplants are performed each year in the United States.

Methods: We conducted a multicenter retrospective study of heart and lung transplantation in HIV-infected patients and describe key transplant- and HIV-related outcomes. Results: We identified 29 HIV-infected thoracic transplant recipients (21 heart, 7 lung, and 1 heart and/or lung) across 14 transplant centers from 2000 through 2016. Compared with an International Society for Heart and Lung Transplantation registry cohort, we demonstrated similar 1-, 3-, and 5-year patient and allograft ...
