Palliative and Hospice Care for Heart Failure

Palliative care is provided by a team of palliative care doctors, nurses and social workers. They work together with your cardiologist (heart specialist) to give you an extra layer of support. The team has a wide variety of approaches to treating congestive heart failure symptoms. These may include medicines, but not always. Palliative care teams are expertly trained to manage symptoms, side effects and stresses.

In *State of the Heart*, Dr. Haider Warraich takes readers inside the ER, inside patients' rooms, and inside the history and science of cardiac disease. *State of the Heart* traces the entire arc of the heart, from the very first time it was depicted on stone tablets, to a future in which it may very well become redundant. While heart disease has been around for a while, the type of heart disease people have, why they have it, and how it's treated is changing. Yet, the golden age of heart science is only just beginning. And with treatments of heart disease altering the very definitions of human life and death, there is no better time to look at the

Approach to the present and future of heart disease, the doctors and nurses who treat it, the patients and caregivers who live with it, and the stories they hold close to their chests. More people die of heart disease than any other disease in the world and when any form of heart disease progresses, it can result in the development of heart failure. Heart failure affects millions and can affect anyone at anytime, a child recovering from a viral infection, a woman who has just given birth or a cancer patient receiving chemotherapy. Yet new technology to treat heart failure is fundamentally changing just what it means to be human. Mechanical pumps can be surgically sown into patients' hearts and when patients with these pumps get really sick, sometimes they don't need a doctor or a surgeon—they need a mechanic. In *State of the Heart*, the journey to rid the world of heart disease is shown to be

Approach reflective of the journey of medical science at large. We are learning not only that women have as much heart disease as men, but that the type of heart disease women experience is diametrically different from that in men. We are learning that heart disease and cancer may have more in common than we could have imagined. And we are learning how human evolution itself may have led to the epidemic of heart disease. In understanding how our knowledge of the heart evolved, State of the Heart traces the twisting and turning road that science has taken—filled with potholes and blind turns—all the way back to its very origin.

providing high-quality care to patients with serious illnesses from the 2nd edition. Drs. Linda L. Emanuel and S. Lawrence Librach, leaders in the field, address the clinical, physical, psychological, cultural, and spiritual dimensions that are integral to the care of the whole patient. They give you a broad understanding of the core clinical skills and competencies needed to effectively approach patient assessment, care of special populations, symptom control, ethical issues, and more. Better understand and manage the common and unique challenges associated with delivering palliative care in various social settings, such as the ICU, hospice, and the home; and to diverse populations, such as children, elders, and vulnerable members of society. Emanuel and Librach provide a practical guide that covers all aspects of the palliative care spectrum.

There is no more universal truth in life than death. No matter who you are, it is certain that one day you will die, but the mechanics and understanding of that experience will differ greatly in today ' s modern age. Dr. Haider Warraich is a young and brilliant new voice in the conversation about death and dying started by Dr. Sherwin Nuland ' s classic *How We Die: Reflections on Life ' s Final Chapter*, and Atul Gawande ' s recent sensation, *Being Mortal: Medicine and What Matters in the End*. Dr. Warraich takes a broader look at how we die today, from the cellular level up to the very definition of death itself. The most basic aspects of dying—the whys, wheres, whens, and hows—are almost nothing like what they were mere decades ago. Beyond its ecology, epidemiology, and economics, the very ethos of death has changed. *Modern Death*, Dr. Warraich ' s debut

book, will explore the rituals and language of dying that have developed in the last century, and how modern technology has not only changed the hows, whens, and wheres of death, but the what of death. Delving into the vast body of research on the evolving nature of death, Modern Death will provide readers with an enriched understanding of how death differs from the past, what our ancestors got right, and how trends and events have transformed this most final of human experiences.

Supportive care is integral to comprehensive heart failure care. It addresses communication with the patient and family, decision-making and education, symptom management, quality of life, and psychological, spiritual and

social aspects of care. The fifth book in the Supportive Care series, Supportive Care in Heart Failure provides an evidence-based overview of heart failure aetiology, management, and supportive care of patients throughout the course of heartfailure. Chapters cover heart failure epidemiology, pathophysiology and treatment, communication with patients and carers, management of common problems and symptoms in heart failure patients, prognostication, end of life care, and bereavement.

End-of-life issues in cardiology are becoming increasingly important in the management of patients in the cardiac unit, but there is frequently a lack of understanding regarding their impact on cardiology practice. The cardiac unit is increasingly becoming the location whereby a number of key clinical decisions

relating to end-of-life care are being made, such as the decision to remove medications, the appropriate removal of cardiac devices, the management of do not resuscitate orders and the requirement for other cardiac procedures in light of the management of the terminally ill cardiac patients. Those working in palliative care need input from the cardiovascular team as the cardiologist is frequently still managing these patients until they are moved to the hospice. That this move into a hospice is often delayed until the very last moment, there is considerable onus on the cardiovascular management of these patients to be much broader in scope and take account of some of the more palliative medical decisions needed in this group of patients. This concise reference will detail the practical issues open to cardiovascular physicians and those medical professionals who manage patients reaching the end of

their life from a cardiology perspective. It will detail the full management options open to them to ensure that their practice is in line with the requirements of the patient nearing the end of their life whether the cause be cardiovascular in origin or who need appropriate management of secondary cardiovascular symptoms. It will also include the various ethical, cultural and geographical issues that need to be considered when managing these patients.
