Basic Operation of a Jet Engine • The
basic operation of a jet engine is: –
Air enters and is compressed in a
compressor. – Fuel is then added
and ignited. – The resulting gas spins
a turbine, – The turbine powers the
compressor. – The gas then exits the
engine at the tailpipe. • The way a
jet engine operates is similar to the

Propulsion (1): Jet Engine Basics

A jet engine uses the same scientific principle as a car engine: it burns fuel with air (in a chemical reaction called combustion) to release energy that powers a plane, vehicle, or other machine. But instead of using cylinders that go through four steps in turn, it uses a long metal tube that carries out the same four steps in a straight-line sequence—a kind of thrust-making production line!
