Neuroethics and Practice helps to define and foster this emerging area at the intersection of neuroethics and clinical neuroscience, which includes neurology, neurosurgery, psychiatry and their pediatric subspecialties, as well as neurorehabilitation, clinical neuropsychology, clinical bioethics, and the myriad other clinical specialties (including nursing and geriatrics) in which practitioners grapple with issues of mind and brain.

~~Neuroethics in Practice | Oxford University Press~~

With the emergence of the field of neuroethics (Marcus 2002), neuroscientists, philosophers, and social scientists have begun to discuss ethical/moral issues with respect to the research and practice of applied neuroscience. More recently, organizational neuroscience (ON) scholars have also raised similar concerns, particularly those that are relevant to employment settings.

Neuroethics refers to two related fields of study: what the philosopher Adina Roskies has called the ethics of neuroscience, and the neuroscience of ethics. The ethics of neuroscience comprises the bulk of work in neuroethics. It concerns the ethical, legal and social impact of neuroscience, including the ways in which neurotechnology can be used to predict or alter human behavior and "the implications of our mechanistic understanding of brain function for society... integrating ...
