It is possible to take a single plan and develop it for several completely different sections, with volumes and surfaces so different as to make them seem unrelated. By contrast, two well-coordinated sections can only have one corresponding plan. The point here is to underscore the primary importance of the sectional view since in this drawing the shapes and surfaces of spaces can be determined with closer correspondence to the built world than is possible in the plan.

The first step in creating a section is to draw a section line through the building model. The section line defines the extents of the section to extract from the building model. Section lines are bidirectional and you can specify the length and depth of the section line either visually, using the pointing device, or by entering numeric values. By default, the section line height as high as ...
