Silicon nitride is a chemical compound of the elements silicon and nitrogen. Si_3N_4 is the most thermodynamically stable of the silicon nitrides. Hence, Si_3N_4 is the most commercially important of the silicon nitrides when referring to the term "silicon nitride". It is a white, high-melting-point solid that is relatively chemically inert, being attacked by dilute HF and hot H_2SO_4 . It is very hard. It has a high thermal stability.

Silicon nitride - Wikipedia

Silicon nitride (Si_3N_4) is a non-oxide structural ceramic material that is usually black or dark grey in colour, and often polished to give a smooth and strikingly reflective surface appearance.

Silicon Nitride is the winner when it comes to its ability to take the heat and abrasion dished out by extreme saltwater conditions and long screaming runs against tight drags. Use originally as a ball bearing material in jet engines, SiN can handle just about anything including wire line. SiN rings are slightly heavier and larger in diameter than other rings to maintain the rugged specifications that make them the perfect choice for heavy duty boat or offshore rods.
