This series of comprehensive manuals gives the home mechanic an in-depth look at specific areas of auto repair.

Since the first edition of Clinical Manual for Assessment and Treatment of Suicidal Patients was published in 2005, advances have been made that increase our understanding of suicidal and self-destructive behavior. Although clinicians cannot unerringly predict which patients will die by suicide, they can focus more successfully on early identification of suicidal behavior and effective intervention, and this new edition of the clinical manual thoroughly explores not only assessment of suicidality but what comes after an at-risk patient has been identified. The authors argue that treating specific psychiatric disorders is not enough to prevent suicide, and they offer clinicians the necessary information and strategies to bridge that gap. The authors' main premise is that suicide is a dangerous and short-term problem-solving behavior designed to regulate or eliminate intense emotional pain -- a quick fix where a long-term effective solution is needed -- and this understanding is the underpinning of the assessment and treatment strategies the authors recommend. The content of this new edition has been thoroughly reviewed and revised, and substantive changes have been made to specific chapters to ensure that the book represents the most current thinking and research, while retaining the strengths of the previous edition. The chapter on assessment has been revised to put the fundamental components of effective treatment in a clinical, case-oriented context and includes an easy-to-use assessment protocol that allows clinicians to determine where individual patients stand on seven dimensions (cognitive rigidity, problem-solving deficits, heightened mental pain, emotionally avoidant coping style, interpersonal deficits, self-control deficits, and environmental stress and social support deficits). The many issues involved in the use of psychotropic medications in suicidal patients are addressed in a new chapter, which includes information on the relevant classes of drugs (such as antidepressants and anti-anxiety agents) and the issues that may arise with their use, including side effects, degree of lethality, and tendency to aggravate suicidality on introduction and withdrawal of the medication. The chapter on special populations has been expanded to include adolescents, elders, and patients with co-occurring substance abuse or psychosis. Because of additional vulnerabilities, treating these groups may call for the use of added or special techniques to ensure the best therapeutic outcomes. Primary care physicians are the first point of contact for many patients, and they may require additional preparation in order to assess and respond to those experiencing suicidal thoughts. The chapter "Suicidal Patients in Primary Care" explores strategies for screening, recognizing, and assessing risk; treating the initial crisis; and developing a crisis management plan. "Tips for Success" appear at intervals, and "The Essentials" are included at the end of each chapter, highlighting the most important concepts. In addition, there are scores of helpful charts and exercises. Practical, accessible, and reader-friendly, the Clinical Manual for Assessment and Treatment of Suicidal Patients is not an academic book but rather is one designed to become an indispensable part of clinicians' working libraries.

An essential tool for writers, editors, proofreaders, designers, copywriters, production managers, and marketers too. The Christian Writer's Manual of Style is an essential tool not only for writers of religious materials, but for their editors, proofreaders, designers, copywriters, production managers, and even marketers. Rather than simply repeating style information commonly available in standard references, this newly updated and expanded edition includes points of grammar, punctuation, usage, book production and design, and written style that are often overlooked in other manuals. It focuses on information relating to the unique needs and demands of religious publications, such as discussions on how to correctly quote the Bible, how to capitalize and use common religious terms, and how to abbreviate the books of the Bible and other religious words. Also included are rarely found items such as: an author's guide to obtaining permissions guidelines for using American, British, and Mid-Atlantic styles discussions of inclusive language, profanity, and ethnic sensitivities discussions of Internet and computer-related language style a list of problem words style issues regarding words from major world religions a discussion of handling brand names in text a list of common interjections issues of type design, paper, copy-fit This edition has been completely updated since the 1988 edition and contains more than twice as much information as the previous edition. This is the most detailed and comprehensive guide of its kind.

This book is a valuable contribution to the debate about the harmful effects of environmental toxicants on human health, which is a growing concern in the 21st century. Complementary chapters decipher the phenomena and highlight the latest developments in environmental toxicology, providing readers with a comprehensive overview of environmental toxicology and human health. Since the toxicants in question are not only chemical or biological in nature, but also include man-made electromagnetic fields, the book explores in detail multidisciplinary approaches to environmental toxicology, with a focus on the following five aspects: 1. The effects of man-made electromagnetic fields (RF-EMF) on human health proposed mechanisms and biological effects and measures. 2. An overview of nanotoxicity, nanomedicine and cancer research. 3. A bio-computational approach to the molecular interaction of environmental carcinogens with DNA. 4. The toxicology of environmental pollutants in the air, dust, soil, water and natural toxins in the environment: exposure and health. 5. Social insects as environmental indicators of ecotoxicological effects in different ecosystems. The book analyzes the carcinogenic, mutagenic, genotoxic and neurotoxic effects of both anthropogenic and natural toxins present in water, soil, air and our surroundings in the form of electro-pollution or electro-smog.
