it down to one key factor: walkability. The very idea of a modern metropolis evokes visions of bustling sidewalks, vital mass transit, and a vibrant, pedestrian-friendly urban core. But in the typical American city, the car is still king, and downtown is a place that's easy to drive to but often not worth arriving at. Making walkability happen is relatively easy and cheap; seeing exactly what needs to be done is the trick. In this essential new book, Speck reveals the invisible workings of the city, how simple decisions have cascading effects, and how we can all make the right choices for our communities. Bursting with sharp observations and real-world examples, giving key insight into what urban planners actually do and how places can and do change, *Walkable City* lays out a practical, necessary, and eminently achievable vision of how to make our normal American cities great again.

For readers of *On Trails*, this is an incisive, utterly engaging exploration of walking: how it is fundamental to our being human, how we've designed it out of our lives, and how it is essential that we reembrace it. "I'm going for a walk." How often has this phrase been uttered by someone with a heart full of anger or sorrow? Or as an invitation, a precursor to a declaration of love? Our species and its predecessors have been bipedal walkers for at least six million years; by now, we take this seemingly arbitrary motion for granted. Yet how many of us still really walk in our everyday lives? Driven by a combination of a car-centric culture and an insatiable thirst for productivity and efficiency, we're spending more time sedentary and alone than we ever have before. If bipedal walking is truly what makes our species human, as paleoanthropologists claim, what does it mean that we are designing walking right out of our lives? Antonia Malchik asks essential questions at the center of humanity's

evolution and social structures: Who gets to walk, and where? How did we lose the right to walk, and what implications does that have for the strength of our communities, the future of democracy, and the pervasive loneliness of individual lives? The loss of walking as an individual and a community act has the potential to destroy our deepest spiritual connections, our democratic society, our neighborhoods, and our freedom. But we can change the course of our mobility. And we need to. Delving into a wealth of science, history, and anecdote -- from our deepest origins as hominins to our first steps as babies, to universal design and social infrastructure, *A Walking Life* shows exactly how walking is essential, how deeply reliant our brains and bodies are on this simple pedestrian act -- and how we can reclaim it.

A new way forward for sustainable quality of life in cities of all sizes *Strong Towns: A Bottom-Up Revolution to Build American Prosperity* is a book of forward-thinking ideas that breaks with modern wisdom to present a new vision of urban development in the United States. Presenting the foundational ideas of the Strong Towns movement he co-founded, Charles Marohn explains why cities of all sizes continue to struggle to meet their basic needs, and reveals the new paradigm that can solve this longstanding problem. Inside, you ' ll learn why inducing growth and development has been the conventional response to urban financial struggles—and why it just doesn ' t work. New development and high-risk investing don ' t generate enough wealth to support itself, and cities continue to struggle. Read this book to find out how cities large and small can focus on bottom-up investments to minimize risk and maximize their ability to strengthen the community financially and improve citizens ' quality of life. Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These "plinths" are the ground floors that negotiate between inside and outside, the public and private spheres. The City at Eye Level qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners, building owners, property and shop managers, designers, and architects.

walk informs and triggers new processes of making, thinking, researching and communicating. In particular, the book examines how the city contains narratives, knowledge and contested materialities that are best accessed through the act of walking. The varied contributions take the form of short stories, illustrated essays, personal reflections and accounts of walks both real and fictional. While artist and RCA tutor Rut Blees Luxemburg and philosopher Jean-Luc Nancy recount a nocturnal journey from Shoreditch to the City of London; architect Peter St John of the practice Caruso St John offers a detailed and personal reflection on the Holloway Road; and architect and author Douglas Murphy examines what he calls London 's ' more politically charged locations ' in his account of a solitary walk through an area of South London. Ultimately, *Walking Cities: London* seeks to understand the wider significance of changing geographies to generate critical questions and creative perspectives for navigating the social and political impact of rapid urban change.

How one committed woman changed the way we think about cities. Jane Jacobs was always a keen observer of her community. When she moved to New York City and began to explore it, she figured out that, just like in nature, the city was an ecosystem. And all its different parts — from sidewalks and parks, to stores and, of course, people — were necessary to keep the city healthy and thriving. So, when urban planner Robert Moses wanted to build highways that would destroy neighborhoods — the lifeblood of New York — Jane fought back. And won! Kids will be inspired to notice the “sidewalk ballet” around them and to protect what makes their communities — and their cities — great!
